Girls engineer fun

Union College summer program participants Rebecca Swartz, above left, Jessica Rivetz and Eve Marengi demonstrate a learning device they made to special needs student Robert Brown Powell during a visit to Northwoods at Hilltop on Friday. The teens are winding up a two-week engineering workshop for high school girls with the theme "Toys and Tools for Disabled Children" taught by Union College Engineering and Computer Science department members and high school teachers. At left, special needs student Butch Foley at Northwoods plays with a toy the high school girls made during the program.
